Subject: Letter of Support for Simudyne Ltd.

Dear Sir or Madam,

IBM's Deep Computing business unit (hereinafter referred to as IBM) is very interested in a number of Simudyne activities that advance scientific and technical pursuits using petascale computing. I am pleased to offer this letter of support to Simudyne.

IBM believes its technical prowess in supercomputing and visualization will drive major breakthroughs for petascale computing. My team is supportive of Simudyne's efforts to leverage its artificial life environment and simulation expertise using IBM platforms. IBM is working closely with Simudyne to deliver industry-leading performance for complex, chaotic, large-scale simulation models. These joint efforts include leveraging IBM's Blue Gene/P and Cell BE solutions.

The Deep Computing team remains open to future collaborations and opportunities with Simudyne. IBM's USA and UK teams are offering support in the form of supercomputer access, algorithm optimization, research consultancy, and systems software.

Thank you for the opportunity allowing IBM to put forth this letter of support and endorsement. Please contact me at +1-713-940-1494 or earldodd@us.ibm.com if you have any questions. IBM looks forward to hearing about your success.

Respectfully yours,

A handwritten signature in blue ink that reads "Earl J. Dodd".
